3. The application is amended as follows:
 - a. The claims are amended as follows:
 - i. Claim 67 is amended to read:

Claim 67. A computer implemented method comprising:

receiving, by the computer, a first request to create a three-dimensional virtual reality scene, wherein the virtual reality scene is ~~two-dimensional and~~ associated with a series of two-dimensional views of the scene from various orientations or locations in three-dimensional space;

receiving a second request to add at least one media object to the virtual reality scene, wherein the media object is two-dimensional;

associating the media object with a series of two-dimensional views of the media object from various orientations or locations in three dimensional space;

preparing a translation vector and a rotation matrix for the media object, the rotation matrix and the translation matrix defining an orientation and a location of the media object in the virtual reality scene, wherein each two-dimensional view of the media object defines a different orientation of the media object and corresponds to a two-dimensional view of the virtual reality scene;

building the virtual reality scene for display, wherein the media object is included within the virtual reality scene, and the virtual reality scene is translatable and rotatable, and wherein translating and rotating the virtual reality scene results in changing the respective two-dimensional views of the media object to give the appearance of the media object having three dimensional qualities.

ii. Claim 73 is amended to read:

Claim 73. A machine readable storage medium storing executable instructions which cause a processor to perform operations comprising:

receiving a first request to create a three-dimensional virtual reality scene, wherein the virtual reality scene is ~~two-dimensional~~ and associated with a series of two-dimensional views of the scene from various orientations or locations in three- dimensional space;

receiving a second request to add at least one media object to the virtual reality scene, wherein the media object is two-dimensional;

associating the at least one media object with a series of two-dimensional views of the media object from various orientations or locations in three dimensional space;

preparing a translation vector and a rotation matrix for the media objects, the rotation matrix and the translation matrix defining an orientation and a location of the at least one media object in the virtual reality scene, wherein each two-dimensional view of the at least one media object defines a different orientation of the at least one media object and corresponds to a two-dimensional view of the virtual reality scene;

building the virtual reality scene for display, wherein the at least one media object is included within the virtual reality scene, and the virtual reality scene is translatable and rotatable, and wherein translating and rotating the virtual reality scene results in changing the respective two-dimensional views of the at least one media object to give the appearance of the at least one media object having three dimensional qualities.

iii. Claim 79 is amended to read:

Claim 79. A system comprising:

means for receiving a first request to create a three-dimensional virtual reality scene wherein the virtual reality scene is ~~two-dimensional and~~ associated with a series of two-

dimensional views of the scene from various orientations or locations in three-dimensional space;

means for receiving a second request to add at least one media object to the virtual reality scene, wherein the at least one media object is two-dimensional;

means for associating the at least one media object with a series of two-dimensional views of the object from various orientations or locations in three dimensional space;

means for preparing a translation vector and a rotation matrix for the at least one media objects, the rotation matrix and the translation matrix defining an orientation and a location of each of the media objects in the virtual reality scene, wherein each two-dimensional view of each media object defines a different orientation of each media object and corresponds to a two dimensional view of the virtual reality scene; and

means for building the virtual reality scene for display, wherein the at least two media objects are included within the virtual reality scene, and the virtual reality scene is translatable and rotatable, and wherein translating and rotating the virtual reality scene results in changing the respective two-dimensional views of the objects to give the appearance of the media objects having three-dimensional qualities.

Allowable Subject Matter

4. Claims 1-8, 10-16, 18-35, 37-59 and 61-79 are allowed.

5. The following is an examiner's statement of reasons for allowance: The present invention teaches the integration of 2D media objects into a 3D scene and the manipulations of the media objects and scene. The claims are allowable over the prior art in view of the applicants amendments and arguments filed on 4/30/2009.

6. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
